

Grad Jable

Grad Jable je postavljen na skrbno izbrani lokaciji, nad izvirom potoka, na robu skalnatega pobočja. Pozidan naj bi bil leta 1530, v pisnih virih pa se prvič omenja že leta 1268. Ima srednjeveško zasnovo, sedanja arhitektura ohranja renesančni karakter.

Zadnje večje predelave je grad doživel po potresu leta 1895. V osi južne fasade je preprost renesančni portal, nad katerim je bil nekoč grb Lambergov, prvih lastnikov. Današnja podoba gradu Jable je rezultat zadnje korenite obnove, ki je bila končana maja 2004.

The Jable Castle stands on a carefully chosen location, above the source of a stream at the edge of a rocky slope. It is believed to be erected in 1530, although the first written references to it back to 1268. It features a Middle Age design, and the Renaissance character is preserved in its present architecture.

The Castle underwent the last major renovation after the earthquake of 1895. A simple Renaissance portal has been preserved in the south facade axis, and there used to be a coat of arms of the original owners, the Lambergers, above it. The last reconstruction of the Castle Jable was completed in May 2004.
